Language Science Press Studies in Laboratory Phonology

We publish high-quality monographs and edited collections focusing on issues in linguistics that are located at the interface between discourse structure, information structure and text structure. In particular, the series addresses the following areas of linguistics: discourse structure, rhetorical relations, information structure (within and beyond the clause), anaphora resolution, textual cohesion, ellipsis, salience, etc. We have a focus on using naturally-occurring data (whether from linguistic corpora or from literary texts) wherever possible. The kind of topics we would like to see addressed include (but are not limited to): formalisms for modelling principles of discourse felicity, information structure (within as well as beyond the clause unit); the role of information structure in determining anaphora
